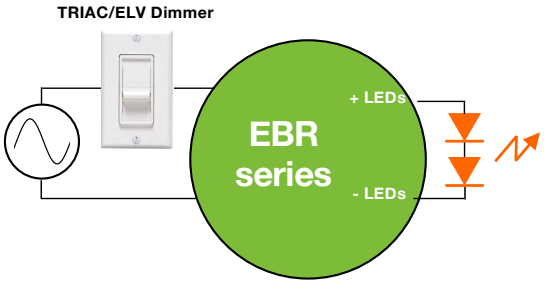
EBR Series

EBR010 6-10 W
EBR015 11-15 W
EBR020 16-21 W

Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

Nominval Input Voltage	Max. Output Power	Output Voltage	Output Current	Efficiency	Max. Case Temperature	THD	Power Factor	Dimming Method	Dimming Range	Startup Time
120 or 220/230/240 Vac	21 W	16 to 42 Vdc	200 to 700 mA	up to 85% typical	90°C (measured at the hot spot)	< 20%	> 0.9	Forward-Phase, Reverse-Phase	1 - 100%	200 ms

Plastic Case:
Diameter: 58 mm (2.28 in)
Height: 31.7 mm (1.25 in)



Neutral:
- White: 120 Vac
- Blue: 220/230/240 Vac

Line:
- Black: 120 Vac
- Brown: 220/230/240 Vac

Wiring Diagram

FEATURES

- Compatible with industry standard phase-cut dimmers: TRIAC (forward-phase or leading-edge) and ELV (reverse-phase or trailing-edge)
- Lifetime: 50,000 hours at 70ºC case hot spot temperature (some models have higher lifetime. Check lifetime curves in page 6)
- 90°C maximum case hot spot temperature
- Low acoustic noise of 20 dBA
- Class 2 power supply
- Protections: output open load, over-current and short-circuit (hiccup), and over-temperature with auto recovery
- Conducted and radiated EMI: Compliant with FCC CFR Title 47 Part 15 Class B at 120 Vac and EN55015 (CISPR 15) at 220, 230 and 240 Vac
- Complies with ENERGY STAR®, DLC (DesignLight Consortium®), CA Title 24, and SSL-1-2016 technical requirements
- IP20-rated case with silicon-based potting
- Worldwide Safety approvals

APPLICATIONS

- Recessed lighting (downlights)
- Commercial & Residential lighting
- Architectural lighting

CA Title 24

5 Year Warranty - 5 Year Warranty - 5

Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

2 - INPUT SPECIFICATION (@25°Cambient temperature)

	Units	Minimum	Typical	Maximum	Notes
Input Voltage Range (Vin) - EBRxxU - EBRxxE	Vac	 90 180	 120 230	 132 264	•The rated output current for each model is achieved at Vin ≥ 115 Vac for EBRxxU and at Vin ≥ 209 Vac for EBRxxE. •At nominal load
Input Frequency Range - EBRxxU - EBRxxE	Hz	 57 47	 60 50	 63 53	
Input Current (Iin) - EBRxxU - EBRxxE	A			0.27 A @ 120 Vac 0.20 A @ 230 Vac	
Power Factor (PF)		0.9	> 0.9		At nominal input voltage and with nominal LED voltage and no dimmer
Inrush Current	A			10 A peak	At any point on the sine wave and 25°C
Leakage Current	µA			250 µA @ 120 Vac 500 µA @ 230 Vac	Measured per IEC60950-1
Input Harmonics	Complies with IEC61000-3-2 for Class C equipment				
Total Harmonics Distortion (THD)				20%	•At nominal input voltage and nominal LED voltage •Complies with DLC (DesignLight Consortium) technical requirements
Efficiency		-	up to 85%	-	•Measured with nominal input voltage, a full sinusoidal wave form and without dimmer connected. •Models with power ≤10W have an efficiency of ≥ 83%.
Isolation	The AC input to the main DC output is isolated and meets Class II reinforced/double insulation power supply ⧈				

3 - OUTPUT SPECIFICATION (@25°C ambient temperature)

	Units	Minimum	Typical	Maximum	Notes
Output Voltage (Vout)	Vdc	16		42	See ordering information for details
Output Current (Iout)	mA	200		700	•See ordering information for details •The rated output current for each model is achieved at Vin ≥ 115 Vac for EBRxxU and at Vin ≥ 209 Vac for EBRxxE.
Output Current Regulation	%	-5		5	•At nominal AC line voltage •Includes load and current set point variations
Output Current Overshoot	%	-	-	10	The driver does not operate outside of the regulation requirements for more than 2 s during power on with nominal LED load and without dimmer.
Ripple Current	%	< 25% of rated output current for each model			•≤ 25% of the rated output current for all models with Vout max ≥ 42 V •≤ 30% of the rated output current for all models with Vout max ≤ 36 V •At nominal LED voltage and nominal input voltage without dimming •In accordance with the IES Lighting Handbook, 9th edition
Dimming Range		1%		100%	•The dimming range is dependent on each specific dimmer. It may not be able to achieve 1% dimming with some dimmers. •When testing, if light is measured, dimming range is based on light output. If no light is measured, dimming range is based on percentage of output current. •Dimming performance is optimal when the driver is operated at its nominal output voltage matching the LED nominal Vf (forward voltage). Dimming performance may vary when the driver is operated near its minimum output voltage.
Start-up Time	ms			200	•With nominal LED voltage and without dimmer attached •Measured from application of AC line voltage to the time where light is visible (about 10% of rated output current)
				400	•With nominal LED voltage, with an approved dimmer attached (see list of approved dimmers in page 5) and at the full dimming conduction angle •Measured from application of AC line voltage to 100% light output •Complies with California Title 24 and ENERGY STAR® luminaire specification

Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

4 - ENVIRONMENTAL CONDITIONS

	Units	Minimum	Typical	Maximum	Notes
Operating Case Temperature (Tc)	°C	-30		+70	Case temperature measured at the hot spot •tc (see label on page 9)
Maximum Case Temperature (Tc)	°C			+90	Case temperature measured at the hot spot •tc (see label on page 9)
Storage Temperature	°C	-40		+85	
Humidity	%	5	-	95	Non-condensing
Cooling	Convection cooled				
Acoustic Noise	dBA			20	Measured at a distance of 1 foot, without and with approved dimmers
Mechanical Shock Protection	per EN60068-2-27				
Vibration Protection	per EN60068-2-6 & EN60068-2-64				
MTBF	> 300,000 hours when operated at nominal input and output conditions, and at Tc ≤ 70°C				
Lifetime (see graphs "Lifetime vs. Case and Ambient Temperature" in section 6)	Hours	50,000			•At Tc ≤ 70°C maximum case hot spot temperature (see hot spot •tc on label on page 9). •Other models have a longer lifetime. For example, the EBR010U-0250-42 (10.5 W) has a 112,000-hour lifetime at Tc = 70°C. See details in section 7.

5 - EMC COMPLIANCE, STANDARD COMPLIANCE AND SAFETY APPROVALS

EMC Compliance			
Conducted and Radiated EMI		FCC CFR Title 47 Part 15 Class B at 120 Vac and EN55015 (CISPR 15) at 220, 230 and 240 Vac	
Harmonic Current Emissions		IEC61000-3-2	For Class C equipment
Voltage Fluctuations & Flicker		IEC61000-3-3	
Immunity Compliance	**ESD (Electrostatic Discharge)**	IEC61000-4-2	6 kV contact discharge, 8 kV air discharge, level 3
	RF Electromagnetic Field Susceptibility	IEC61000-4-3	3 V/m, 80 - 1000 MHz, 80% modulated at a distance of 3 meters
	Electrical Fast Transient	IEC61000-4-4	± 2 kV on AC power port for 1 minute, ±1 kV on signal/control lines
	Surge	IEC61000-4-5	± 1 kV line to line (differential mode) /± 2 kV line to common mode ground (tested to secondary ground) on AC power port, ±0.5 kV for outdoor cables
		ANSI/IEEE c62.41.1-2002 & c62.41.2-2002 category A, 2.5 kV ring wave	
	Conducted RF Disturbances	IEC61000-4-6	3V, 0.15-80 MHz, 80% modulated
	Voltage Dips	IEC61000-4-11	>95% dip, 0.5 period; 30% dip, 25 periods; 95% reduction, 250 periods

Standard Compliance and Safety Agency Approvals	
NEMA	SSL-1-2016
UL	UL8750 recognized Class 2
cUL	CAN/CSA C22.2 No. 250.13-14 LED equipment for lighting applications
CE	IEC61347-2-13 electronic control gear for LED Modules & EN55015 (EMC compliance)

Safety	Units	Minimum	Typical	Maximum	Notes
Hi Pot (High Potential) or Dielectric Voltage Withstand	Vdc	4242			•Insulation between the input (AC line and Neutral) and the output •Tested at the RMS voltage equivalent of 3000 Vac

Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

6 - PROTECTION FEATURES

Under-Voltage (Brownout)

The EBR series provides protection circuitry such that an application of an input voltage below the minimum stated in paragraph 1 (Input Specification) shall not cause damage to the driver.

Short Circuit

The EBR series is protected against short-circuit such that a short from any output to return shall not result in a fire hazard or shock hazard. The driver shall hiccup as a result of a short circuit or over current fault. Removal of the fault will return the driver to within normal operation. The driver shall recover, with no damage, from a short across the output for an indefinite period of time.

Internal Over temperature Protection

The EBR series incorporates circuitry that prevents internal damage due to an over temperature condition. An over temperature condition may be a result of an excessive ambient temperature or as a result of an internal failure. When the over temperature condition is removed, the driver shall automatically recover.

Output Open Load

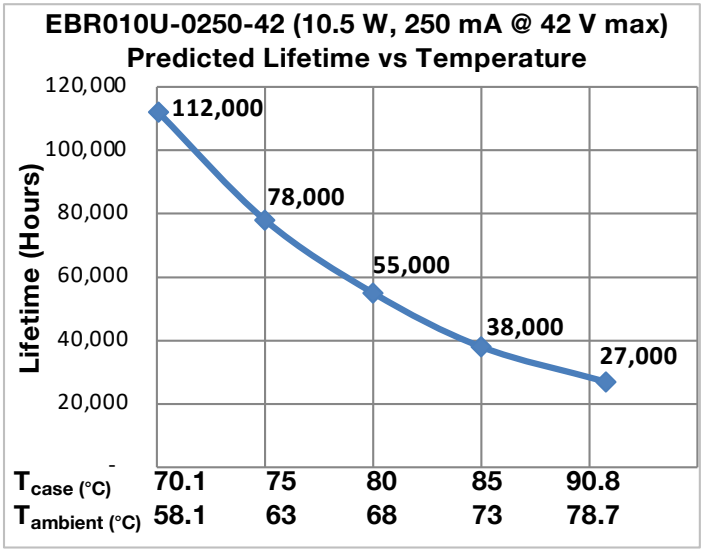
When the LED load is removed, the output voltage of the EBR series is limited to 1.3 times the maximum output voltage of each model.

Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

7 - PREDICTED LIFETIME VERSUS CASE AND AMBIENT TEMPERATURE

Lifetime is defined by the measurement of the temperatures of all the electrolytic capacitors whose failure would affect light output under the nominal LED load and worst case AC line voltage. The graphs in figure 1 are determined by the electrolytic capacitor with the shortest lifetime, among all electrolytic capacitors. It represents a worst case scenario in which the LED driver is powered 24 hours/day, 7 days/week. The lifetime of an electrolytic capacitor is measured when any of the following changes in performance are observed:

1) Capacitance changes more than 20% of initial value
2) Dissipation Factor (tan δ): 150% or less of initial specified value
3) Equivalent Series Resistance (ESR): 150% or less of initial specified value
4) Leakage current: less of initial specified value



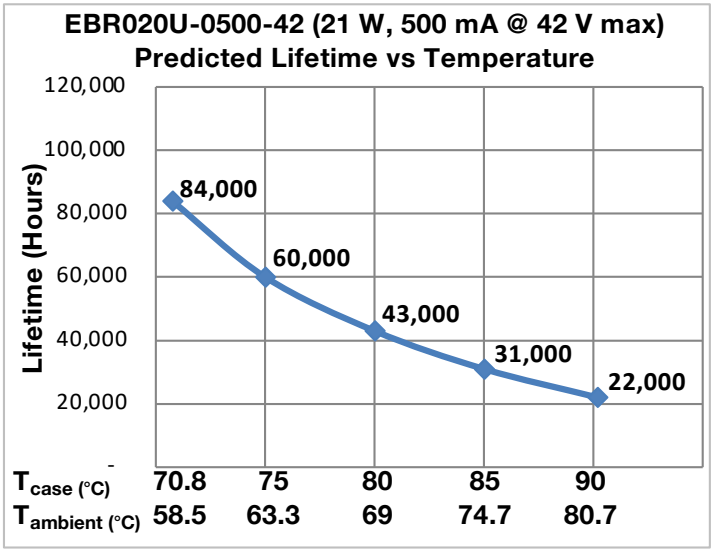


Figure 1

Notes:

- *The ambient temperature $T_{ambient}$ and the differential between $T_{ambient}$ and T_{case} mentioned in the above graphs are relevant only as long as both the driver and the light fixture are exposed to the same ambient room temperature. If the LED driver is housed in an enclosure or covered by insulation material, then the ambient room temperature is no longer valid. In this situation, please refer only to the case temperature T_{case}.*
- *It should be noted the graph "Lifetime vs. Ambient Temperature" may have an error induced in the final application if the mounting has restricted convection flow around the case. For applications where this is evident, the actual case temperature measured at the Tc point in the application should be used for reliability calculations.*

Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

8 - PHASE-CUT DIMMING

Dimming of the driver is possible with standard TRIAC-based incandescent dimmers that chop the AC voltage as shown in Figure 2, or with ELV dimmers. During the rapid rise time of the AC voltage when the dimmer turns on, the driver does not generate any voltage or current oscillations, and inrush current is controlled. During the on-time of the AC input, the driver regulates the output current based upon the conduction angle. The RMS value of the driver output current is proportional to the on-time of the AC input voltage. When operating with an incandescent dimmer, the RMS output current varies depending upon the conduction angle and RMS value of the applied AC input voltage. Figure 3 shows the typical output current versus conduction angle at nominal input voltage.

When using low power EBR models (specifically < 10 W) with a reverse-phase or forward-phase dimmer, always make sure the minimum required load is applied to the dimmer. Check the dimmer documentation for minimum load requirements.

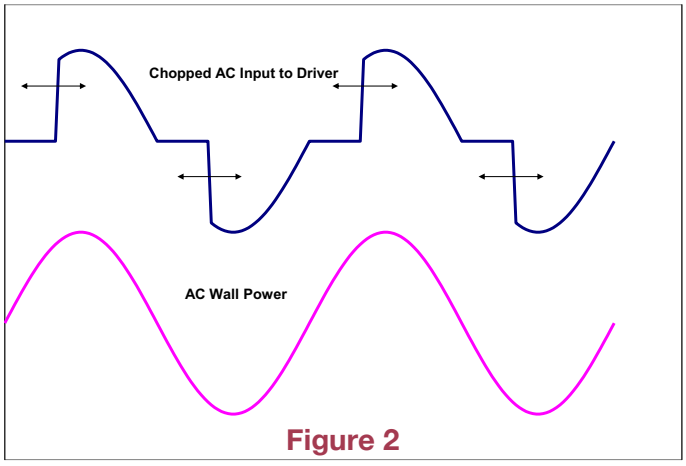

Figure 2

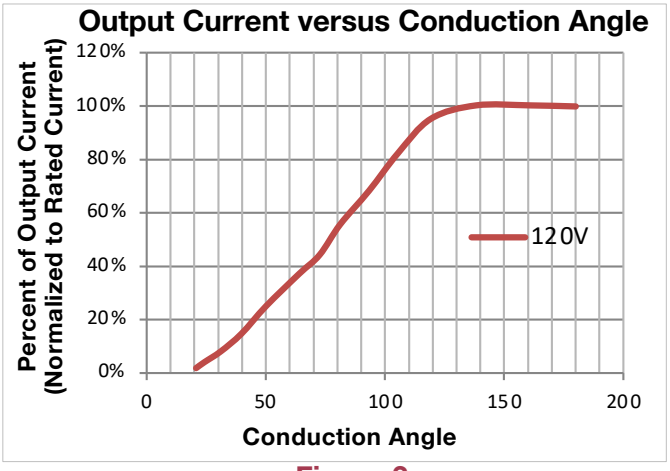

Figure 3

9 - COMPATIBLE PHASE-CUT DIMMERS & DIMMING RANGE

The dimming range represents typical values and may vary for the same dimmer model number when installed.

Model EBR020U-0500-42 (21 W, 500 mA @ 42 V max)

Dimmer List			Dimming Range (% Iout)		
Manufacturer	Series	Model Number	Max	Min	Flicker Result
Cooper	Aspire	9573WS	100	24.2	PASS
Cooper	Devine	DI06P-A-K	100	9.5	PASS
Legrand	Paddle	ADPD453L-W2	100	22	PASS
Leviton	Illumatech	IPI06	100	4.1	PASS
Leviton	Sureslide	6631-LW	100	0.6	PASS
Leviton	Sureslide	6613-PL	100	7.1	PASS
Lutron	Skylark	S-603PG (1)	81	6	PASS
Lutron	Diva	DVCL-153PR	95.4	1.2	PASS
Lutron	Ariadni	AY-600P-AL	100	10.7	PASS
Lutron	Maestro	MRF2-600M-WH	96.2	3	PASS
Lutron	Skylark	S-600P-AL	98.2	4.5	PASS
Lutron	Diva	DV-600P-WH	98.2	5.8	PASS
Lutron	Nova	N-600	100	5.6	PASS
Lutron	Skylark	SLV-600-WH	100	8	PASS
Lutron	Glyder	GLV-600-WH	100	3.8	PASS

Note (1): All models exhibit limited range with this dimmer

Dimming compatibility charts are available for each model on the EBR series page at: erp-power.com

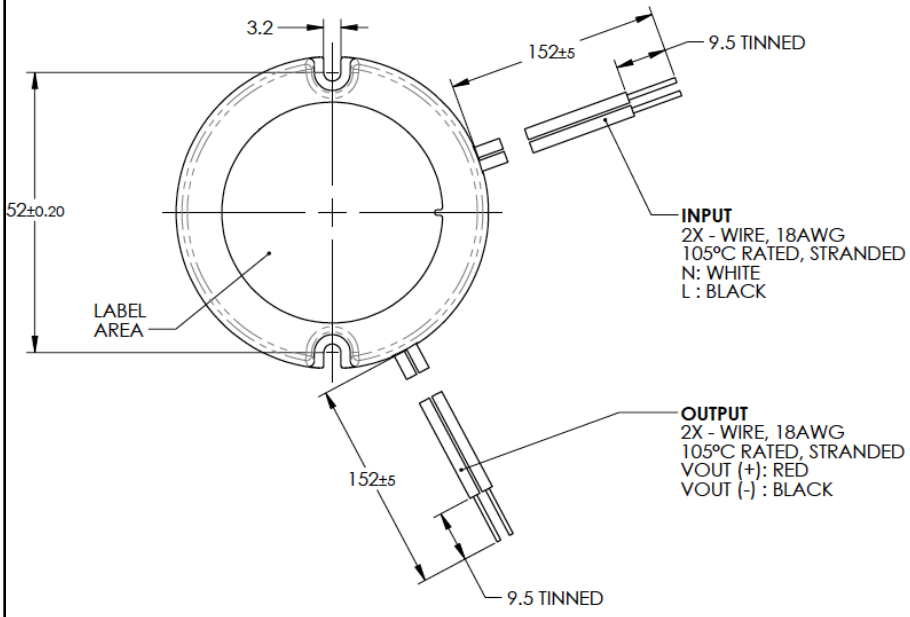
Constant Current LED Drivers with Deep TRIAC/ELV Dimming (1 - 100%) and with Fast Startup Time

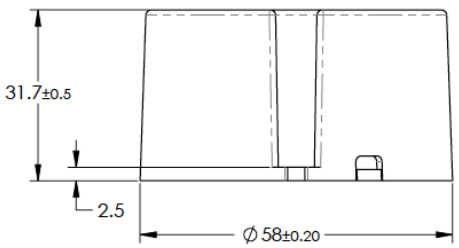
10 - MECHANICAL DETAILS

Packaging Options: Plastic case
I/O Connections: Flying leads, 18 AWG on power leads, 152 mm (6 in) long, 105°C rated, stranded, stripped by approximately 9.5mm, and tinned. All the wires, on both input and output, have a 300 V insulation rating.
Ingress Protection: IP20 rated. Only models in the EBR020 (16-20 W power range) have potting.
Flammability Rating: UL94 V-0
Mounting Instructions: The EBR driver case must be secured on a flat surface through the two mounting tabs, shown here below in the case outline drawings.

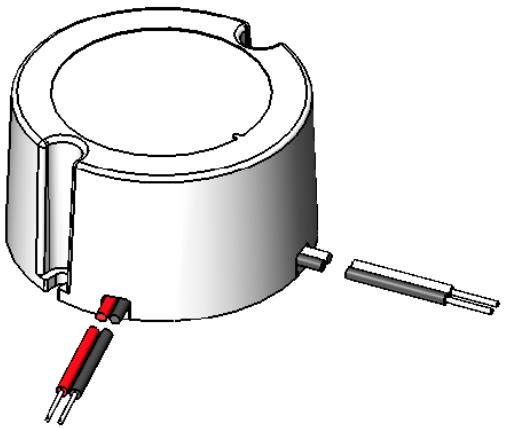
11 - OUTLINE DRAWINGS

Dimensions: Diameter: 58 mm (2.6 in), Height: 31.7 mm (1.25 in)
Volume: 83.7 cm^3 (5.1 in^3)
Weight: 170.5 g (6 oz)





All dimensions are in mm



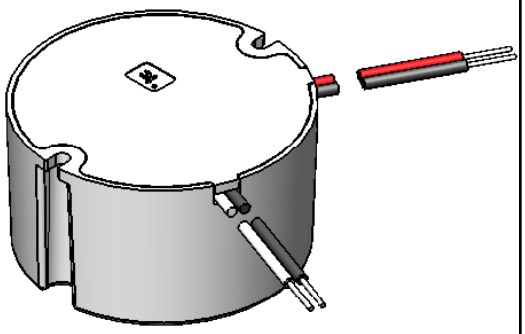


Figure 4
